

Responses Per Day and Cumulative Response Rate Over Time (National Period Only) - Gray Colored Bars are Weekends

This graph shows daily EMS and fire-rescue agency responses to the 2024 [National Prehospital Pediatric Readiness Project \(PPRP\) Assessment](#) during the national assessment period (May-July 2024) across 55 states/territories. It excludes over 350 responses from field test states (NC, NJ, CNMI) collected earlier (Jan-Mar 2024). Therefore, the 45.4% response rate depicted on the graph is not the final national response rate. Including field test data, the national response rate is 46% (7,039/15,293).

The bars represent daily total number of responses, with grey bars for weekends. The red trend line shows the increasing response rate, with planned communications (emailed invitation and reminders, and calls) marked to illustrate their impact. For more information, contact your state [EDC TA Liaison](#).
